

InSite SiteWork and Field General Release 19 System Requirements

**DO NOT INSTALL ON ANY SYSTEM WHICH DOES NOT MEET THE FOLLOWING
MINIMUM REQUIREMENTS!**

Select the system icon in the Windows control panel to check the system specifications.

- **Operating System:** Windows 10
- **System RAM** 8 GB RAM minimum. Importing large CAD files requires more RAM
- ***Video Adapter (Graphics Accelerator) for Image Take-off:** Graphic cards should have a *minimum* of 1GB dedicated video RAM with 2GB or more recommended.

* Dedicated graphics cards use their own memory and DO NOT share system memory. Popular manufacturers include NVIDIA and AMD. Such cards are used for graphic intensive applications (AutoCAD, InSite, etc.) and gaming applications.
- **Two Monitors:** During training two monitors are required. Two monitors also provide maximum productivity. A trained estimator can use InSite SiteWork on one monitor. TV's are low resolution and unsuitable.
- **Ports:** Two USB ports. One for the InSite Site Work Security key. A second USB port for training headset.
- **Headset for online training.** A computer headset with headphones & built-in microphone is best. [This is a nice model, available from Staples.](#) A telephone with a headset for hands free operation can also be used but ties up a phone line for the duration of the class.

Please Note: *Students who use a speakerphone or audio played through the computer speakers will be muted due to feedback. Interaction with the instructor will be through typed messages using a chat app.*
